<p>Are the intervention and comparator clear? Were all outcomes important to patients considered?</p>	
<p>Was the recommendation based on the best current evidence?</p>	
<p>Is there an appropriate specification of values associated with each of the outcomes?</p>	
<p>Do the authors indicate the strength of their recommendations?</p>	
<p>Is the evidence supporting the recommendations easily understood and is it consistent with the recommendations?</p>	
<p>Was the influence of conflicts of interest minimized?</p>
