Guide		Comments
I	Are the results valid?	
1	Did participating patients present a diagnostic dilemma?	
2	Did investigators compare the test to an appropriate, independent reference standard?	
3	Were those interpreting the test and reference standard blind to the other results?	
4	Did investigators perform the same reference standard to all patients regardless of the results of the test under investigation?	
II	What are the results?	
1	What likelihood ratios were associated with the range of possible test results?	
III	How can I apply the results to my patient care?	

Guide		Comments
1	Will the reproducibility of the test result and its interpretation be satisfactory in my clinical setting?	
2	Are the study results applicable to the patients in my practice?
