

CRITICAL REVIEW FORM: PROGNOSIS

Citation: Vision Study Investigators. Association of Postoperative High-Sensitivity Troponin Levels With Myocardial Injury and 30-Day Mortality Among Patients Undergoing Noncardiac Surgery. The Vascular Events in Noncardiac Surgery Patients Cohort Evaluation (VISION) Study. JAMA 2017; 317:1642-2651.

How serious is the risk of bias?	
Was the sample of patients' representative?	
Were patients classified into prognostically homogeneous groups?	
Was follow-up sufficiently complete?	
Were outcome criteria objective and unbiased?	
What are the results?	
How likely are the outcomes over time?	
How precise are the estimates of likelihood?	
How can I apply the results to patient care?	
Were the study patients and their management similar to those in my practice?	
Was the follow-up sufficiently long?	

Can I use the results in the management patients in my practice?
